**“GRONDAIA MONTAFACILE KIT”**

Thanks to this practical kit of metal gutters anybody will be able to install a gutter to the roof of the log cabin in an absolutely easy and quick way and with great satisfaction for the final result.

The Kit includes all necessary items, even the fastenings, the sealant, the protective gloves and illustrated instructions (watch our tutorial on YouTube).

If you buy our KIT of metal gutters you do not have to worry about purchasing anything else for the assembly.

The installation system is very easy and user-friendly. You do not need any experience and no special equipment, only a screwdriver and a drill are necessary.

Artegronda gutters and accessories are manufactured in robust galvanized and painted metal; they are resistant, they do not become deformed and last for a great many years. They have a 20-year-warranty.

The gutters have a very important function, that is to say they must prevent the façades of your wooden shed from becoming soaked in water anytime it rains.

This protection decidedly prolongs the life to your wooden garden shed and considerably reduces the periodical maintenance operations.

A large variety of kits are available to meet all roof sizes of wooden garden sheds sold on the market.

The gutter sections can be superimposed in different ways, thus enabling an adjustment of the total length by 40 cm. plus or minus. In this way you can avoid cutting the gutter in order to adjust it to the exact size of the roof pitches.

**"GRONDAIA MONTAFACILE KIT"**

An amazing easy system to join two gutters; without junction sleeves, with no screws and no rivets.

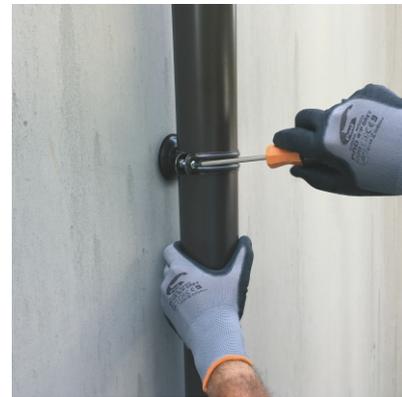

The drain spout is external and it is snap-fitted with a quick movement, with no need of tools, screws or rivets.

A special silicone adhesive band is already applied to the end-cap, in this way it is strongly connected to the gutter and ensures excellent sealing from the very beginning.

The MONTAFACILE gutter shank is made of hot galvanized and powder-painted sheet. It is therefore high quality and capable of supporting the gutter in any situation and over many years. The gutter is firmly fastened to the support by simply folding two metal tabs by hand.

Besides the gutter, we supply you with the equipment needed for rainwater drainage: downspout, elbows, collars.
